About Us

Gemini Techniek B.V., based in the Netherlands, specializes in custom-built filling, dispensing, and cleaning machines. Every system is designed to match the customer's specific process—whether it's a practical dispensing unit, a high-performance filling line, or a smart cleaning solution that integrates seamlessly into existing operations.

With an international presence supported by a strong network of distributors and representative partners, we're able to deliver our custom solutions—and reliable support—worldwide.

Our story began over 40 years ago, sparked by the need for machinery that could do more than just the basics. Standard solutions often fell short, so we set out to develop tailor-made systems that improve efficiency, deliver consistent quality, and help our customers get the most out of their production.

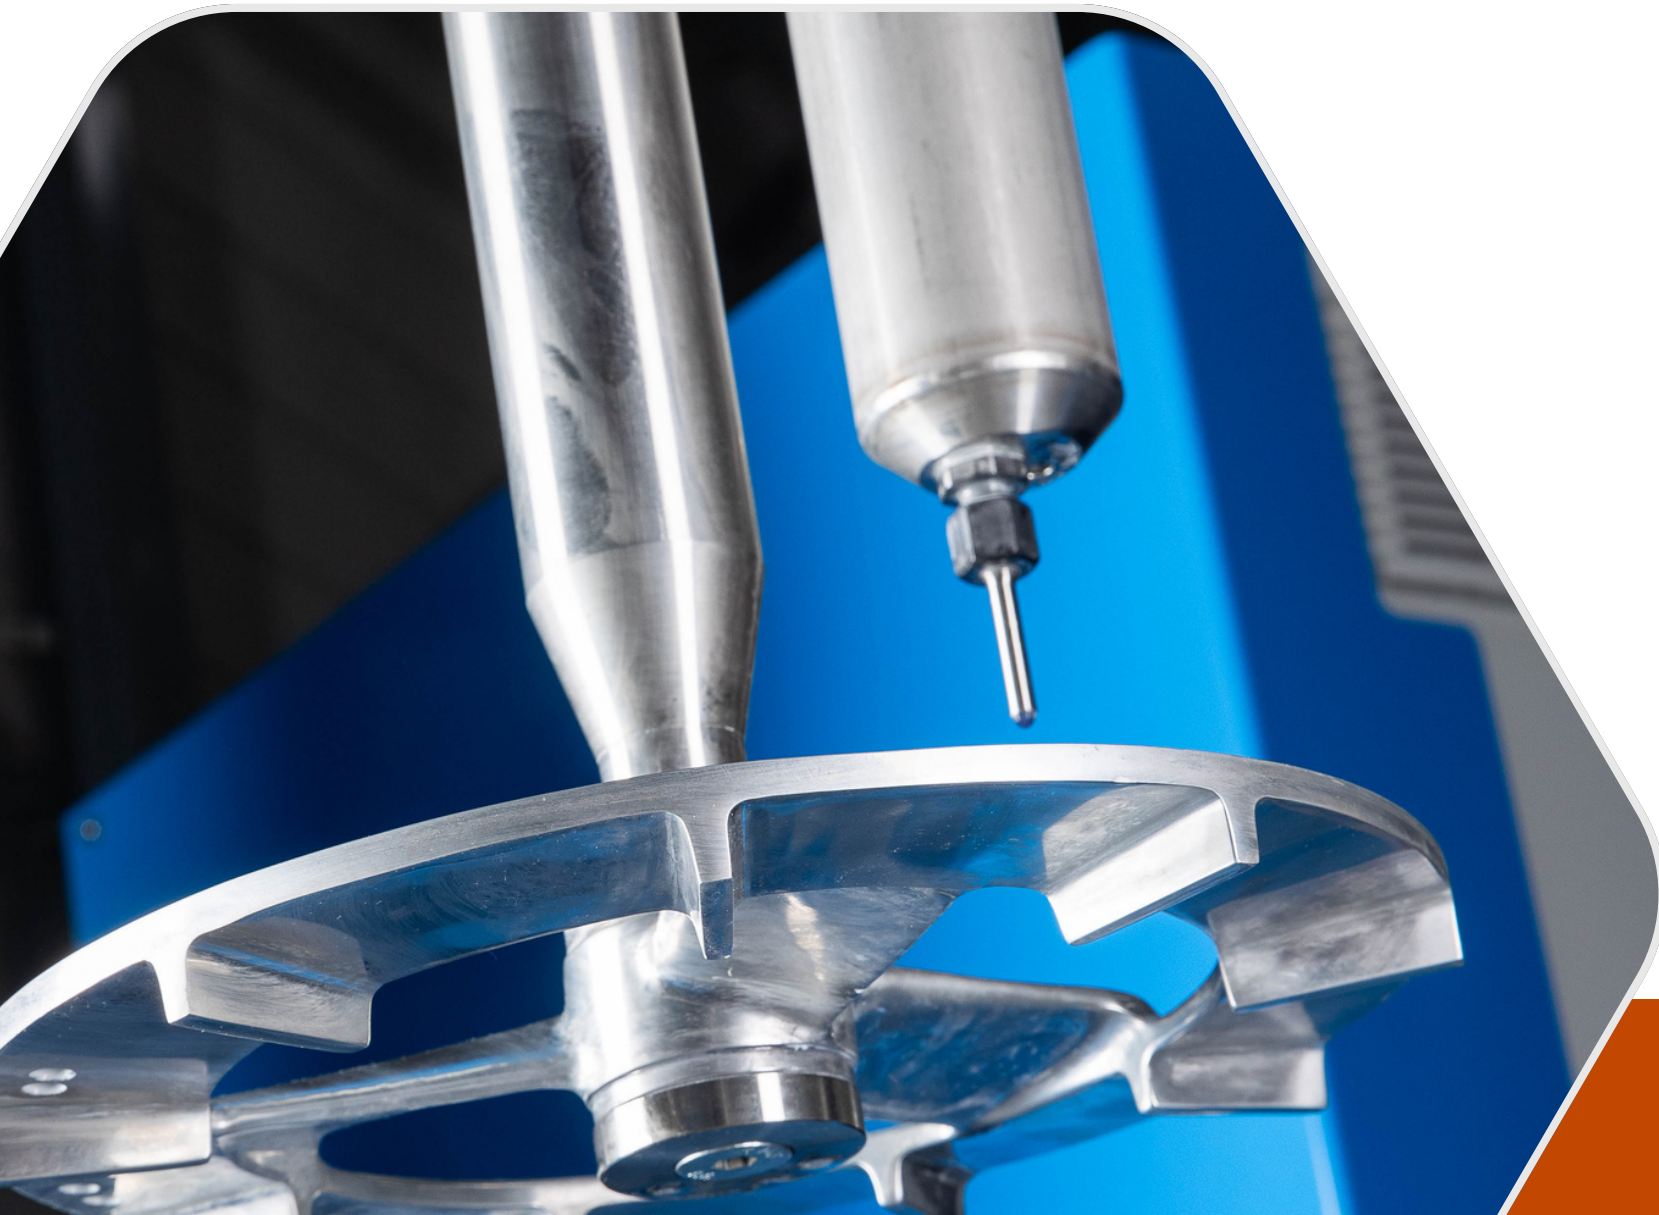

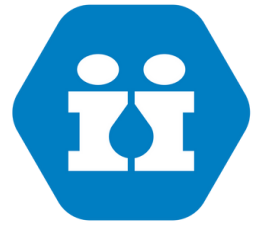

What makes Gemini Techniek unique?

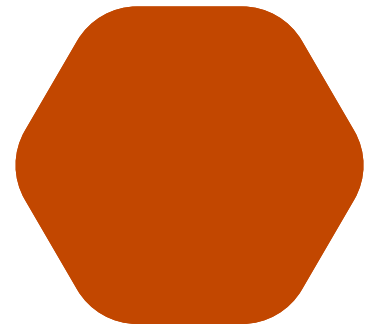

What sets Gemini Techniek apart is our focus on truly understanding each customer's needs. Rather than offering off-the-shelf solutions, we develop custom systems that integrate smoothly into existing workflows. Our commitment to quality, innovation, and personal support has helped us build long-term partnerships worldwide.

From the first idea to installation and aftercare, we handle every step in-house, making us more than just a supplier, but a trusted partner in your production process.

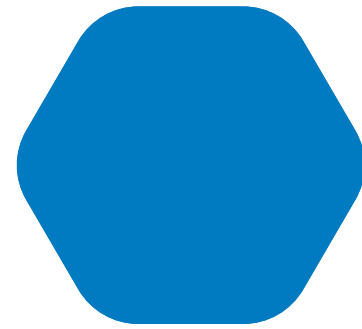

Our Core Competencies

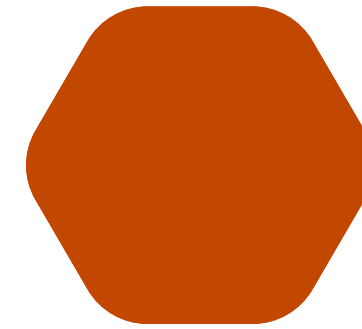

Proven reliability and extensive experience

Decades of expertise in designing and manufacturing high-quality machines for various industries.

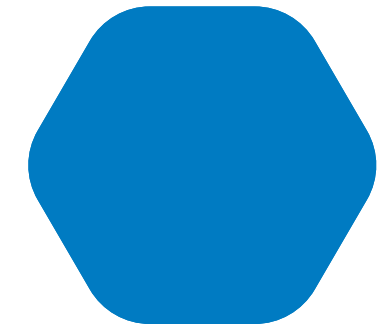

Customized Solutions

Machines tailored to your specific production requirements for optimal performance and efficiency.

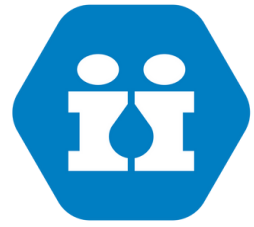

Innovation & Sustainability

Cutting-edge, eco-friendly technologies that reduce waste and improve resource efficiency.

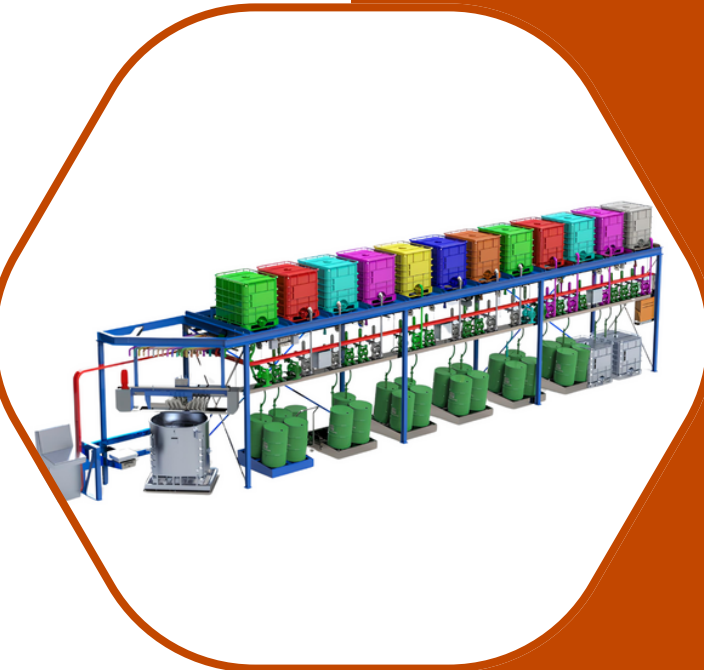

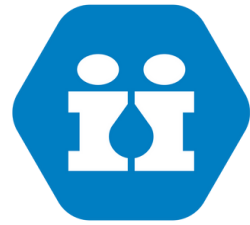

Expert Support & Service

An experienced team providing service, training, and technical assistance to ensure seamless operation.

Solutions for Filling, Dispensing and Cleaning

Filling Machines

Gemini Techniek provides flexible, high-precision filling systems for liquids—ranging from semi-automatic to fully automated. Our machines minimize waste and ensure accurate dosing for various packaging types.

We offer two main technologies:

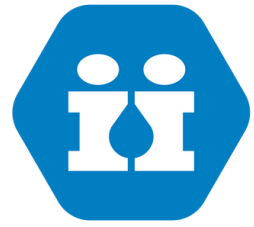

- **Volumetric filling**

based on a piston in a self-priming cylinder, where stroke length and diameter determine the volume.

- **Gravimetric filling**

based on weight, using a scale-controlled valve for precise dosing.

Dispensing Machines

Gemini Technik delivers high-precision dispensing systems for micro to large-volume dosing. Our solutions are designed for accuracy, consistency, and efficiency across various industries.

We offer two main dispensing methods:

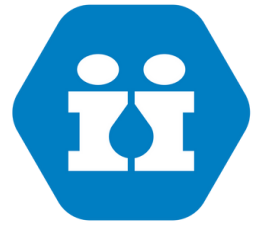

Batch Dispensing

- Components are dosed into large batches
- Batches are mixed and connected to a filling system
- Ideal for users with existing filling systems or who prefer homogenized volumes

In-can Tinting

- Components are dispensed directly into the final packaging
- No need for a large batch or separate filling system
- Reduces cleaning and changeover time between products

Cleaning Machines

Gemini's line of cleaning machines is built for a wide range of applications, capable of cleaning paint, wallpaper paste, textile coatings, ink, and more.

- Compatible with aqueous, caustic, or solvent-based cleaning chemistries – we'll help you choose the most effective option for your contaminants
- Designed for efficiency and sustainability, with fluid reuse and optimized cleaning cycles
- Minimizes environmental impact while ensuring thorough and reliable cleaning

Our Customers

Gemini-Techniek serves renowned companies worldwide across various sectors:

- Paint and coating industry
- Wallpaper industry
- Chemical industry
- Laboratories and R&D facilities
- Adhesives & sealants
- Food industry
